

ÖMER EREN

Full-Stack Software Engineer | Fintech Decision Systems and Applied AI

Istanbul - Türkiye | erenomer@gmail.com | +90 530 766 60 32

linkedin.com/in/omer-eren | github.com/Battlelamb

Target Roles: Senior Full-Stack Software Engineer | Software Engineer (Fintech) | Applied AI Engineer | Technical Lead

- Full-stack engineer at the intersection of regulated fintech and applied AI - building auditable systems for financial reconciliation, credit decision support, privacy tooling and workflow automation at Türk Finansman/Kredim.
- End-to-end delivery - carrying complex rules from source data to services and interfaces, and on to tested, reviewable results with Python, SQL and T-SQL, TypeScript, Java and Rust.
- Applied AI products - locally hosted hybrid RAG services, large language model applications and human-in-the-loop workflows.
- Auditability and privacy focus - format-preserving anonymization, source traceability, role-based access and approval gates producing output ready for external audit and regulatory review.
- Technical leadership and mentoring - leading a developer team, establishing agile delivery practices, and over seven years of teaching experience.

AREAS OF EXPERTISE

Full-Stack Development | Fintech Decision Systems | Credit Scoring and Risk Analytics | Financial Reconciliation | Applied AI and LLM Applications | Hybrid RAG | Data Modeling and Integration | Reporting Automation | Regulatory Reporting and Auditability | Technical Leadership

CAREER HIGHLIGHTS

Türk Finansman A.Ş. (Kredim)

Full-Stack Software Engineer

Istanbul

Oct 2025 - Present

Scope: Building auditable systems for financial reconciliation, credit decision support, regulatory reporting and privacy controls. Designing end-to-end solutions from source data to services and interfaces; automating reporting, reconciliation and alerting workflows with explicit validation and operational controls.

Technologies: Python, T-SQL, SQL Server, FastAPI, Flask, Next.js/React, Rust, Go, PostgreSQL, OpenSearch, YAML, Docker

Selected Achievements:

- Audit-ready reconciliation infrastructure - reproducible reconciliation workflows between financial and operational systems; isolating double-counting and classification issues and producing evidence for external audit and regulatory review.
- Local hybrid RAG service - a fully on-premise service for internal documentation combining vector and keyword search with source traceability, privacy controls and scheduled synchronization.
- Rust-based anonymization platform - co-developed a format-preserving platform that keeps referential integrity across systems; validated its discovery, masking configuration, automated tests and read-only dry-run safeguards.
- SkorAI - modular credit scoring and decision support platform - Flask, a YAML rule engine and a Next.js/React interface; configurable logic derived from the existing rule set, with business rules separated from the codebase, versioned into an audit log and reversible in one step.
- Portfolio-level rescoring and model analysis - candidate model comparison, performance assessment, and defining validation and approval gates for potential rollout.
- Regulatory and sanctions screening automation - data extraction, cross-checking and evidence preparation across credit risk and sanctions screening workflows; cross-system reconciliation tools for shared customer and loan contexts.

Monachus.io

Full-Stack Developer, Team Lead

Istanbul

Jan 2021 - Oct 2025

Scope: Designing and building decision systems over streaming data and real-time data products; product delivery, team leadership and establishing agile processes.

Technologies: Java, Spring Boot, Kafka, Flink, Next.js, React Native, Python, pandas, Dash, PostgreSQL

Selected Achievements:

- Complex event processing (CEP) engine - designed and built a multi-component system for rule-based decisions on streaming data using Java, Spring Boot, Kafka and Flink; rules are defined in a visual editor and reach the running system without a new deployment. The project received public innovation funding through KOSGEB.

- International telecom delivery - delivered the Next.js-based Mobily Ranan platform for a leading Saudi telecom operator and contributed to its React Native mobile application.
- Real-time data products - end-to-end development of data processing and visualization products, including a drag-and-drop widget dashboard in React and ECharts.
- Team leadership and agile transformation - led a team of three developers, introduced agile delivery practices and mentored across the stack.

MakerCodes

Part-Time Programming Instructor **Istanbul** | **Jan 2018 - Oct 2025**

Scope: Designing and running project-based programming workshops and full-stack bootcamps; mentoring participants in Git-based workflows.

Technologies: JavaScript, Python, C#, Java, React, Node.js, Git, MongoDB, Arduino, Unity

Self-Employed

Full-Stack Developer **Istanbul** | **Jul 2017 - Apr 2021**

Scope: Delivered production line monitoring, packaging qualification and operations planning applications for manufacturing businesses on .NET architectures. Ran a dealer order management system end to end, from requirements analysis through rollout and support.

Technologies: .NET, Angular, Microsoft SQL Server

Metro Elektrik

Full-Stack Developer and IT Manager **Istanbul** | **Mar 2016 - Mar 2017**

Scope: Developed the NeTahsilat payment integration and sales reporting interfaces; supported day-to-day IT operations.

Technologies: C#, ASP.NET/.NET MVC, Angular, Microsoft SQL Server

SELECTED PROJECTS

Synapse AI **Python, FastAPI, Next.js, PostgreSQL, Docker**

An application covering customer segmentation, hypothesis generation, synthetic focus groups and strategy cards, with audit logs, role-based access and human approval gates.

OpenHub · github.com/Battlelamb/OpenHub **Python, FastAPI, React, Docker**

A public multi-agent coordination platform with task queues, verification gates, role-based access control and human-approved processes.

TECHNICAL AND MANAGEMENT COMPETENCIES

TECHNICAL COMPETENCIES

Python, SQL/T-SQL, TypeScript, Java, Rust, Go, C#

- FastAPI, Flask, Spring, .NET, REST API
- React, Next.js, React Native
- SQL Server, PostgreSQL, data modeling
- Kafka, Flink, OpenSearch
- LLM applications, hybrid RAG, RAG evaluation
- Docker, Git, automated testing, CI practices

MANAGEMENT COMPETENCIES

Team leadership and mentoring

- Agile delivery and process setup
- Requirements analysis and stakeholder management
- Auditability and regulatory compliance
- Technical documentation and knowledge transfer
- Training design and delivery
-

EARLIER ROLES

Project Manager, EPIN (2013 - 2015) | Front-End Developer, Sirius Diamond (2012)

Web Developer and Designer, Grey Istanbul (2010 - 2011) | 3D Artist, Reaktor / Erokum (2005 - 2007)

EDUCATION

Bachelor's Degree Istanbul University, Istanbul | 2004 - 2012

LANGUAGES AND INTERESTS

LANGUAGES: Native: Turkish | Full professional: English | Professional working: German

INTERESTS: Open-source multi-agent systems | Locally hosted LLM infrastructure | Programming instruction
